SUMMARY

Senior Full-Stack Engineer with **7+ years** of experience, specialising in **Angular** frontend development with solid full-stack capabilities across **Node.js** and **InterSystems Cache** backends. Predominantly worked in the **Healthcare** domain, building and owning production-critical enterprise applications. Hands-on experience with **REST API design**, **AWS**, **CI/CD**, and scalable production systems. Delivered a **9× performance improvement** on a self-initiated platform adopted org-wide. Thrives in **Agile and SAFe** environments, contributing across the full stack while driving code quality, mentoring engineers, and shipping features predictably at scale.

TECHNICAL SKILLS

Frontend: Angular (v2–16+), RxJS, Angular Material, TypeScript, HTML5, CSS3, D3.js, Chart.js

Backend: Node.js, Express.js, NestJS, InterSystems Cache (ObjectScript)

Databases: PostgreSQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, S3, IAM), CI/CD Pipelines, Git, Linux

Testing & Automation: Cypress, E2E Automation, Test-Driven Development

Integrations & Protocols: REST APIs, WebSockets, Socket.IO, SendGrid, JWT, OAuth2, PWA

Methodologies: Agile, SAFe, Code Review, Mentoring

AI-Assisted Development: GitHub Copilot, Cursor

EXPERIENCE

Stolt Nielsen (Maritime Shipping & Logistics Product)

Mar 2026 – Present

Senior Software Engineer

Hyderabad, India

- Implemented **cron-scheduled email notification workflows** using **NestJS** and **SendGrid** with **Redis distributed locks**, eliminating duplicate triggers across multiple application pods and ensuring exactly-once delivery in a distributed environment.
- Resolved **REST API** defects and cross-layer UAT issues spanning **Angular** frontend and **NestJS** backend, directly unblocking production deployments and improving release readiness.

Surgical Information Systems (Healthcare Product – Ambulatory Surgery Centres)

May 2023 – Mar 2026

Analyst Development (Senior Software Engineer)

Hyderabad, India

- Drove technical direction for a **4-member engineering team** across sprint planning, architecture decisions, and code quality standards, ensuring consistent and predictable feature delivery.
- Conceived and delivered “**Ignition**”, a self-initiated **Node.js** bulk data seeding and load simulation platform that cut healthcare data creation time from **2.5 hours to 15 minutes (9× improvement)**, directly accelerating QA and release cycles.
- Engineered **controlled concurrency** and API call orchestration handling thousands of parallel requests, eliminating race conditions and database deadlocks without backend infrastructure changes.
- Improved **Angular** application performance by introducing **OnPush change-detection** strategies, reducing unnecessary re-renders and improving UI responsiveness for clinical end users.
- Elevated team code quality through structured **code reviews**, architecture discussions, and junior developer mentoring.

Quest Diagnostics (Healthcare Product – Diagnostics Labs)

Feb 2020 – Apr 2023

Software Engineer

Hyderabad, India

- Owned end-to-end delivery of full-stack features across **Angular** frontend and **InterSystems Cache (ObjectScript)** backend, building production-critical **diagnostic lab workflows** used daily by clinical teams across the US.
- Built a **reusable Angular component library** that became the standard foundation for new enterprise healthcare workflows, significantly reducing per-feature development effort.
- Increased application resilience by implementing **PWA** capabilities – service workers, offline support, and caching – improving usability in low-connectivity clinical environments.
- Drove adoption of **Cypress E2E automation**, replacing manual regression testing and measurably improving release confidence and QA efficiency.

Prutech Solutions

Nov 2018 – Nov 2019

Software Engineer

Hyderabad, India

- Transformed static business reports into interactive **D3.js** and **Chart.js** dashboards, enabling real-time decision-making for enterprise stakeholders and eliminating manual data export workflows.
- Built **Angular** single-page applications (SPAs) for enterprise analytics platforms, delivering complex business logic using **TypeScript**, **RxJS**, and **REST API** integrations.
- Integrated **Node.js** backend APIs with SQL Server databases, improving data reliability and application performance across the analytics platform.

People Tech Group

Oct 2017 – Aug 2018

Junior Software Engineer

Hyderabad, India

- Improved user experience by replacing polling-based updates with **real-time WebSocket notifications** via **Socket.IO**, enabling live bi-directional communication between Angular clients and servers.
- Contributed across the full SDLC on enterprise web applications using **Angular**, JavaScript, HTML, CSS, and Linux environments.

PROJECTS

Ignition – Bulk Data Seeder & Load Simulation | *Node.js, TypeScript, Redis, AWS*

- Self-initiated platform that reduced healthcare data seeding from **2.5 hours to 15 minutes (9× faster)**, directly unblocking QA and release teams and adopted as the org-wide automation standard.
- Implemented concurrency controls with rate limiting and request queuing to safely execute thousands of parallel API calls without race conditions or database deadlocks.

SIS Complete – Enterprise Surgical Workflow Platform | *Angular, Node.js, Cypress, AWS*

- Designed a **reusable, configuration-driven Angular data table component** adopted as the product-wide standard, significantly reducing repetitive development per feature cycle.
- Delivered **100% of the planned feature roadmap** on schedule while onboarding a new Angular team and driving org-wide **Cypress E2E automation** adoption.

Quantum Lab Services Manager – Diagnostics Platform | *Angular, InterSystems Cache, Node.js, AWS*

- Delivered full-stack features for a **large-scale laboratory diagnostics platform** serving clinical teams across the US, using Angular and InterSystems Cache (ObjectScript).
- Implemented **client-side and API-level caching** that reduced redundant server calls and improved responsiveness, alongside **PWA** capabilities for low-connectivity clinical environments.

Sentiment 360 – Enterprise Analytics Dashboard | *Angular, D3.js, Chart.js, Node.js, Socket.IO*

- Replaced static reports with **interactive D3.js and Chart.js dashboards** and **real-time WebSocket notifications** via Socket.IO, enabling live business insights and eliminating manual exports.
- Integrated **Microsoft OAuth2 authentication** on the Angular frontend, upgrading from a basic login to enterprise-grade identity management.

EDUCATION

Biju Patnaik University of Technology

B.Tech in Electronics and Telecommunication

Aug 2013 – May 2017

Bhubaneswar, Odisha
